Hi,  
My name is Holly Eagleston, and I'm the founder of Firescape, a wildfire risk technology company purpose-built for utilities operating in high fire-threat environments. I wanted to provide comment on the Wildfire Safety Advisory Board Utility Wildfire Risk Tools workshop.

We appreciate WSAB staff for hosting this workshop and for centering the conversation on the practical needs of publicly owned utilities and cooperatives — organizations that often carry significant wildfire exposure but have fewer resources to develop sophisticated risk tools in-house.

Firescape's platform is designed specifically to address that gap. We provide utility asset risk modeling that integrates weather, terrain, vegetation, and grid topology to generate actionable, real-time risk intelligence at the asset level. Critically, our tools go beyond risk scoring — we help utilities forecast and calibrate protective operation settings, including fast-trip, non-reclose, and Public Safety Power Shutoff protocols. This means utilities can make more precise, defensible decisions about when and how to adjust grid operations to reduce ignition risk, rather than relying on broad, conservative thresholds that can unnecessarily impact customers.

We are based in New Mexico and have put this into practice with several utilities across the southwest. We'd welcome the opportunity to collaborate with WSAB, Energy Safety, and California utilities and cooperatives to bring these capabilities to bear here in the state. We're happy to follow up with staff or any interested parties after today's session, you can reach out to us at our website: [www.firescape.ai](http://www.firescape.ai)

Thanks,  
Holly
