Re: Urgent Lifesaving Concerns Re PG&E's Proposed 2028-2037 Undergrounding Plan

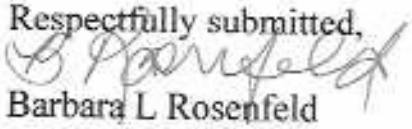

I am writing as a resident of the Oakland Hills, Montclair District. I have been alarmed at the nonchalance towards public safety exhibited by PG&E. While acknowledging that undergrounding is the safest alternative for reducing wildfire risk, PG&E has chosen a more profitable path.

Twenty-five lives were lost in the Oakland Hills 30+ years ago - before the increased density (of people, cars and structures). Since that time, the roads have deteriorated and the vegetation overgrowth has continued. No parking restrictions have been posted or enforced. Roads are frequently blocked in the best of times, including on Red Flag days.

PG&E has chosen not to invest in the undergrounding needed to protect this WUI neighborhood. Instead, PG&E chooses to obstruct homeowner views by increasing the height of its failing infrastructure - with no advance notice or benefit to affected homeowners, much less monetary compensation for the destroyed views.

OEIS should not approve a methodology that leaves homeowners at extreme risk to loss of life in order to maximize PG&E's profits.

Respectfully submitted,

Barbara L Rosenfeld
