Geodatabase Template Changelog

Draft Data Guidelines v4.0

Changes to fields:

Feature Dataset	Feature Class(es) and/or tables	Change
Initiative	All	Removed fields: InitiativeTarget, QuarterlyProgress, CumulativeProgress, InitiativeTargetUnits, ChangeOrder, ChangeOrderDate, ChangeOrderType, ChangeOrderTypeComment (note that not all fields were present in all feature classes previously)
Initiative	Asset Inspection Point, Grid Hardening Point	Added field UnitsRepresented
PSPS	Support Structure Detail	Removed fields AssociatedNominalVoltagekV and AssociatedOperatingVoltagekV
Asset Point	Camera	Replaced field SupportStructureID with field AssetID and added field AssetFeature
Initiative	Asset Inspection (3) and Grid Hardening (2)	Added field FieldNotes

Changes to domains / formats:

Feature Dataset	Feature Class(es) and/or tables	Field	Change
Risk Event	Unplanned Outage	Isolation Device Type	Added values "Recloser" and "N/A"
All	All	UtilityID	Changed abbreviation for Bear Valley Electric Service to "BVES" (at BVES' request)

Errors Corrected

- In the geodatabase template, added the field TreeTrunkDistance in the Support Structure Damage Detail table. This field was specified in the guidelines but accidentally omitted from the previous published template.
- In the geodatabase template, changed the field type of the risk fields in the Support Structure feature to be floating point number. These were mistakenly made strings (text) in this feature class only in the previous published template.
