Comments:

Instructional guidelines for Hazard Assessment

Section 1 – General Information

This is information of who is conducting the analysis and what job task is being analyzed. Annotate where the contractors will have access on site.

Section 2 – Emergency Information

List the type of communication device and any equipment. Ensure that all have proper training on emergency response.

Section 3 – Hazard Identification & Control

Clearly identify the tasks that will be performed. Be as detailed as possible so that you can properly perform a job safety analysis or risk assessment. You cannot identify hazards until we know what we are doing and the associated tools have been identified.

Once you understand the task(s) to be performed you can:

- Mark the type of work that will be occurring such as Hot work, confined space etc.
- List the applicable hazards – analyze the potential impact, and then ensure proper controls have been put in place.

IDENTIFY	
<input type="checkbox"/> Hazards <input type="checkbox"/> Voltage levels involved <input type="checkbox"/> Skills required – (evidence of this) <input type="checkbox"/> Any “foreign” (secondary source) voltage source <input type="checkbox"/> Any unusual work conditions <input type="checkbox"/> Number of people needed to do the job	<input type="checkbox"/> Shock protection & Arc flash boundaries <input type="checkbox"/> Available incident energy <input type="checkbox"/> Potential for arc flash (Conduct an arc flash risk assessment.) <input type="checkbox"/> Heavy loads – overhead work <input type="checkbox"/> Adjacent Operations
ASK	
<input type="checkbox"/> Can the equipment be de-energized? <input type="checkbox"/> Are backfeeds of the circuits to be worked on possible? <input type="checkbox"/> Is a standby person required? <input type="checkbox"/> are all equipment in good working order?	<input type="checkbox"/> Are chemicals going to be used? What are they? <input type="checkbox"/> Will they generate waste and if so disposal? <input type="checkbox"/> Will they need special permits <input type="checkbox"/> If working outside – do they have protection from elements?
CHECK	
<input type="checkbox"/> Job plans <input type="checkbox"/> Single-line diagrams and vendor prints <input type="checkbox"/> Status board (CHECK WITH OPERATOR DESK) <input type="checkbox"/> Equipment inspections performed <input type="checkbox"/> Ladder safety: non-conductive <input type="checkbox"/> Rigging & Hoisting equipment	<input type="checkbox"/> Safety procedures <input type="checkbox"/> Contractor orientation – is it current? <input type="checkbox"/> Individuals are familiar with the facility <input type="checkbox"/> Certificates for operating Industrial Equip <input type="checkbox"/> Is Fire Safety equipment being disabled <input type="checkbox"/> Risk of spillage associated with work
KNOW	
<input type="checkbox"/> What the job is <input type="checkbox"/> Who else needs to know – Communicate!	<input type="checkbox"/> Who is in charge
PREPARE FOR EMERGENCY	
<input type="checkbox"/> Is the standby person CPR/AED trained? <input type="checkbox"/> Is the required emergency equipment available? Where is it? <input type="checkbox"/> Where is the nearest telephone? <input type="checkbox"/> Where is the fire alarm? <input type="checkbox"/> Is confined space rescue available if CFS being performed? <input type="checkbox"/> Fall Protection rescue plan & Personnel	<input type="checkbox"/> What is the exact work location? <input type="checkbox"/> How is the equipment shut off in an emergency? <input type="checkbox"/> Are the emergency telephone numbers known? <input type="checkbox"/> Where is the fire extinguisher? <input type="checkbox"/> Are radio communications available? <input type="checkbox"/> Is an AED available?
THINK

TBC-HS-500
Tailboard / Safety Meeting Record

<input type="checkbox"/> About the unexpected event . . . What if? <input type="checkbox"/> Lock — Tag — Test — Try <input type="checkbox"/> Test for voltage — FIRST <input type="checkbox"/> Use the right tools and equipment, including PPE	<input type="checkbox"/> Install and remove temporary protective grounding equipment <input type="checkbox"/> Install barriers and barricades <input type="checkbox"/> Overhead obstructions marked
--	---

If electrical work is being done – make sure to indicate the hazardous energy that is in the area and controls that are going to be used. This includes confirming contractor aware of approach boundaries.

Section 4 – Personal Protective Equipment

Based on the work being done – and the area in which the work is being done may require special PPE. Make sure the contractor is aware that they must provide their own equipment – but ensure that they are aware of what PPE should be used.

Section 7 – Tailboard completion

The TBC employee conducting the meeting should print and sign. Then obtain names and signature of all workers attending the meeting. Attach any work plan – diagrams etc. that were discussed in the meeting.

As the last check, ensure that communication is performed for all personnel that may be affected by the task at hand. Are there other contractors working in the area – or will their work effect TBC employees by shutting off safety equipment or power to certain buildings. Make sure this is communicated.

POWER DELIVERY GUIDING PRINCIPLES

1

All injuries are preventable

2

Every day safety is
MY responsibility

3

Leadership is accountable
for preventing injuries

4

See something, Say
something, Do something

5

Live the 7 Saves

AT WORK. AT HOME. AT PLAY.

Section 1.3 – Lesson Learned 1 – Top 10 Off Normal Situations Job Aid

Confidential
Do Not Distribute

Top 10 Off-Normal Situations

No.	Off-Normal Situation	Example	Action
1	Working in restoration mode	Time pressure with customers out of power	Do not rush Focus on one task at a time
		Customer interrupts repair to check on status of job	After a distraction, back up and refocus.
2	Working/driving in adverse weather	Driving in rain	Slow down, leave more space between vehicles, use headlights and wipers, apply Rain-X
		Working in heat	Hydrate and stretch
3	Working with something new (crew member, apprentice, equipment, tool)	Working with apprentice or someone new to your crew	Discuss previous experience/qualifications; Ask them for input in pre- and post-job briefing
		Working with new tool or piece of equipment	Read operating manual; do a two-minute review on how to properly use item; check for previous events associated with tool/equipment
4	Outside event distractions (birthday, weekend, coming back to work, etc.)	It's your/close family member's birthday	Choose to focus on work at work and birthday when you leave; communicate with crew members about potential distractions so we can all look out for one another
		You are returning from vacation	Do a two-minute review on returning to work
5	Change in work plan or required clearance boundaries	You are in the middle of a job and are reassigned to a different job	Clean up and secure your current work location; avoid self-imposed time pressure; do new tailboard on new job
		You are in the middle of a job and something did not go as planned	Re-tailboard with entire crew, discuss what happened
6	Unexpected conditions in your environment (hole, slippery walkway, fence, dog, customer)	Slippery walk surface	Identify in HAF, tape it off, set cones out
		Hole in walk path	Identify safest walk path in HAF, mark it by placing a cone
		Dog on property	Ask customer to secure it before going onto property
7	Poor housekeeping	Office desk is covered in papers and books, disorganized	Spend five minutes cleaning up before starting your next work task
		Truck is full of spare items and belly is not clear	Spend five minutes cleaning up before leaving yard; load vehicle in order of planned jobs to ensure material is easily accessible when needed
8	Delays	Time pressure from a delay in job	Do not rush Do a two-minute review prior to restarting job
9	Improper PPE or material (or improperly used)	You do not have right material to complete job	Stop and ask PL for correct material
		You see someone wearing regular sunglasses while working	Stop what they are doing and ask them to put on their safety glasses
10	Insufficient MOT	You are not able to park out of harm's way	Use safety cones and other vehicles as barriers; If you do not have enough, request MOT

All Injuries Are Preventable

What we mean:

We believe that every injury or near-miss event at work, at home or at play is preventable.

The reality is that collectively,
we have a great deal of control over the circumstances around us.

What we don't mean

Events we cannot control include being hit by an asteroid, a zombie apocalypse and alien encounters.

It's not an accident!

Using the word **accident** may imply that it was not preventable and this can divert the focus away from accountability and prevention.

Look at injury and near-miss events as collective missed opportunities to predict and prevent!

ZERO TODAY!

Remember to ask "What could go wrong?" and help achieve our goal of ZERO Today! each and every day.

Commit to working ZEROToday! all of 2023

January 3, 2023

The big picture: Let's renew our focus on working 2023 ZEROToday! with no accidents and injuries. We want everyone to go home safe to their families the same way they came to work.

Taking a closer look: When it comes to safety, it's important to not only focus on the physical aspect of health and safety, but to also focus on and take care of your mental health. Working safely includes both mind and body, and your mental well-being plays an equally important role in your overall safety. Because of its importance, this year, we will be incorporating a focus on mental well-being into our safety communications.

Below are the safety expectations for everyone:

- Help model and mentor safe behavior.
- Don't walk distracted – be mindful and present in the moment (texting, reading, etc.).
- Hold onto the handrails or take the elevator.
- If your hands are full, take the elevator.
- Exercise caution and obey all traffic signs in the company parking lot when driving (most speed limits are 15 MPH) or walking.
- Offer peer-to-peer coaching (help others be safe).
- If you see an unsafe condition, either correct it, or take temporary measures to make it safe (obstruct the condition, mark the condition, etc.) and then contact facilities.
- Report unsafe conditions and near misses via [Safety Activity Management \(SAM\)](#).
- Ask "What could go wrong?" before you start any tasks and stop if unsure.
- Ask for help or seek support when you need it - Lyra (our EAP) is available 24/7/365.
- Check with your business unit for guidance on specific tasks.

Safety Expectations

We want you to be aware of and follow NextEra Energy's safety expectations for all employees. They are designed to keep everyone safe on the job. Here are NextEra Energy safety expectations:

- Help model and mentor safe behavior.
- Eliminate distractions while walking (texting, reading, etc.).
- Hold onto the handrails on the stairs or take the elevator.
- If your hands are full, take the elevator instead of the stairs.
- Exercise caution and obey all traffic signs in the company parking lot when driving (most speed limits are 15 MPH) or walking.
- Offer peer-to-peer coaching (help others be safe).
- If you see an unsafe condition, either correct it, or take temporary measures to make it safe (obstruct the condition, mark the condition, etc.) and then contact facilities.
- Report unsafe conditions and near misses via [FOCUS1440](#).
- Ask "What could go wrong?" before you start any tasks and stop if unsure.
- Check with your business unit for guidance on specific tasks.
