## **List of Attachments**

Attachment A	2021 EVM Scope of Work – Year End Summary
Attachment B	2021 EVM Work Performed Outside the 2021 EVM Scope of Work – Year-End Summary
Attachment C	2022 EVM Scope of Work
Attachment D	Verification of Sumeet Singh

Pacific Gas and Electric Company (PG&E) respectfully submits this February 2, 2022 90-Day Report (February Report) updating its Corrective Action Plan in response to Ordering Paragraph 3 in Resolution M-4852 issued by the California Public Utilities Commission (Commission) on April 16, 2021 (Resolution).

## EXECUTIVE SUMMARY

On May 6, 2021, we submitted our Corrective Action Plan with two commitments for our 2021 Enhanced Vegetation Management (EVM) program, to perform 80% of our work on the highest 20% of risk ranked miles and to perform 1,800 miles of EVM work by the end of the year. We exceeded both commitments by performing:

- 98% of our EVM work on the top 20% of risk ranked miles exceeding our commitment by 18 percentage points; and,
- 1,983 miles exceeding our commitment by more than 10%.

Last year was also significant because there were unprecedented changes in the wildfire risk in our service area as a result of the California drought. We learned that we must further expand our wildfire mitigation efforts for non-Red Flag Warning (RFW) days.<sup>1</sup> To address this continuously evolving wildfire risk, in July 2021, we implemented our Enhanced Powerline Safety Setting (EPSS) program on approximately 11,500 miles of distribution circuits, or 45% of the circuits in HFTD areas. With EPSS, we engineered changes to our electrical equipment settings so that if an object such as vegetation contacts a distribution line, power is automatically shut off within 1/10<sup>th</sup> of a second, reducing the potential for an ignition. This program had a dramatic impact, decreasing CPUC-reportable ignitions from electrical equipment on EPSS-enabled circuits by 80% compared to a three-year average.

Thus, while in 2021 we exceeded our Corrective Action Plan commitments, it is clear that wildfire risks in the Western United States continue to change. We must take bold steps to address these changing risks.

Currently we are considering such steps in our 2022 WMP, including expanding EPSS to the entirety of our HFTD areas because it provides an even greater level of risk reduction (with further enhancements to reduce the impact of EPSS on customers). This would be part of a comprehensive approach to addressing wildfire risk, which also would include our vegetation management, Public Safety Power Shutoff (PSPS) and system hardening programs (with undergrounding).

In advance of submitting our 2022 Wildfire Mitigation Plan (WMP) to the Office of Energy Infrastructure Safety (Energy Safety) on February 25, 2022, we are continuing to get stakeholder feedback and evolve our ignition-risk reduction strategies based off our learnings from 2021.

---

<sup>1</sup> A RFW indicates a level of wildfire risk from weather conditions, as declared by the National Weather Service.

We are continuing to implement our EVM plan according to the established 2022 EVM Scope of Work, consistent with the 2021 Wildfire Distribution Risk-Model (WDRM) and EVM Tree-Weighted Prioritization methodology. If changes are made to our approach to the 2022 EVM Scope of Work, we will submit a revised February Report detailing those changes.

In this February Report, we provide an overview of the year-end EVM performance in 2021, describe key developments that occurred in 2021 including the implementation of the EPSS program, discuss the 14 elements specified in the Resolution, and provide detailed information regarding our 2022 EVM Scope of Work.

### **OVERVIEW OF 2021 EVM PERFORMANCE**

The Commission placed PG&E in Step 1 of the Enhanced Oversight and Enforcement Process (EOEP) because we had not “sufficiently prioritize[ed our] Enhanced Vegetation Management based on risk.”<sup>2</sup> We submitted a Corrective Action Plan that described our risk-informed 2021 EVM Scope of Work. Our workplan addressed the highest risk circuit segments (also referred to as Circuit Protection Zones or CPZs), subject to external constraints such as permitting requirements, landowner refusals to perform work, and access issues from wildfire impacts, weather, or other unsafe field conditions.

The two commitments in our Corrective Action Plan were to perform 80% of our 2021 EVM work on the highest 20% of the risk-ranked miles and to perform 1,800 miles of EVM work by the end of the year.<sup>3</sup> Our Corrective Action Plan also included several interim commitments. As a result of the dedicated efforts of our co-workers and contractor partners, we exceeded our interim and year-end commitments.

First, we exceeded our interim mileage commitment for June by 205 miles and our September commitment by 184 miles.

Second, through December 31, 2021, we completed and verified 1,983 miles of EVM work, exceeding our 1,800 mile commitment by more than 10%.<sup>4</sup>

Third, we performed 98% of our EVM work on the top 20% of highest risk CPZs, exceeding our commitment of 80%. The amount of EVM work performed and risk-ranking for the work locations is provided in Table 1 below and also reflected in Figure 1.

---

<sup>2</sup> Resolution, p. 1.

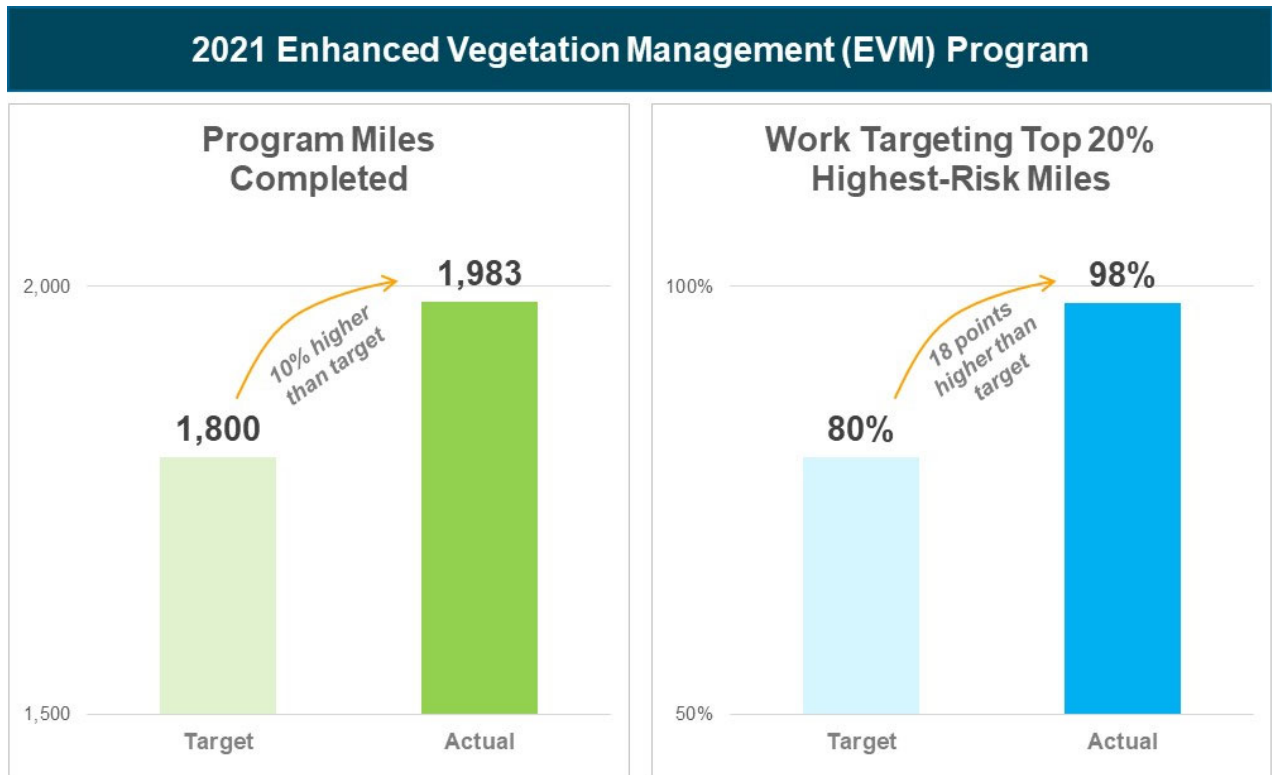

<sup>3</sup> Corrective Action Plan, p. 1.

<sup>4</sup> The miles include: (1) 1,895 miles on the CPZs in our 2021 EVM Scope of Work which are identified in Attachment A and (2) 88 additional carry-over miles of EVM work on CPZs outside the 2021 EVM Scope of Work identified in Attachment B.

**Table 1: EV M Progress Through December 31, 2021**

Risk Tranche	Work Verified (WV) Miles <sup>5</sup>	% of Total WV Miles
<= 10%	1,910	96%
> 10 – 20%	31	2%
> 20 – 30%	21	1%
> 30 – 40%	6	0.3%
> 40 – 50%	9	0.4%
> 50%	7	0.3%
<b>Total</b>	<b>1,983</b>	<b>100.0%</b>

**Figure 1: 2021 EVM Year End Status on Commitments**

We also made significant progress in strengthening our EVM program controls, operations, and communications.

We instituted program controls over EVM program targets and the 2021 EVM Scope of Work through a formal change control process under the oversight of our Wildfire Risk Governance Steering Committee (WRGSC). This change control process involved a thorough review by our vegetation management experts and the WRGSC and resulted in additional CPZs being added to our 2021 EVM Scope of Work as described in our August 4, 2021 90-Day Report (August Report) and our November 4, 2021 90-Day Report (November Report).<sup>6</sup>

During 2021, we implemented our Lean Operating System across the company. The Lean Operating System includes a rigorous process of frequent communication and visibility through our daily and weekly operating reviews. This process allowed us to monitor EVM work progress and constraints, and to quickly communicate and address issues and concerns. We also adopted processes for better internal communications of workplans so that our teams stayed aligned.

We improved our approach to addressing constraints by standing up the Constraints Resolution Team. This team focuses on working with local governments, agencies, and landowners to address permitting or access to property constraints that temporarily prevented or delayed EVM work from being performed. Our team gathers additional information regarding constraints, review data, and work with other internal teams to resolve permitting or property access issues.

Finally, when we experienced challenges implementing our 2021 EVM Scope of Work, we notified the Commission and Energy Safety and quickly developed corrective actions. For example, as we explained in the November Report, we discovered a programming issue with our tree assessment tool (TAT) and a need to re-patrol some areas because of a gap in the guidance given regarding clearances. These issues were identified through our internal controls and escalated through the Lean Operating System. We addressed both issues and implemented lessons learned.

Overall, we believe that during 2021 we addressed the Commission's concerns that led to the EOEP by using a risk-informed approach to perform 98% of our EVM work on the highest 20% of risk ranked miles and exceeding our 2021 mileage commitment.

### **KEY DEVELOPMENTS DURING 2021**

While 2021 was pivotal for EVM execution, the year also highlighted new climate-driven challenges that are radically altering our environment. In 2021, California had its 8<sup>th</sup> driest year in the last 127 years. PG&E's entire service area experienced extreme and severe drought conditions prior to the rainstorms that occurred in the latter part of the year, resulting in fires igniting on non-RFW days. In 2021, 95% of the total acreage (~2.3 million) burned by wildfires

---

<sup>5</sup> Data is rounded and may result in an approximate 1 mile variance.

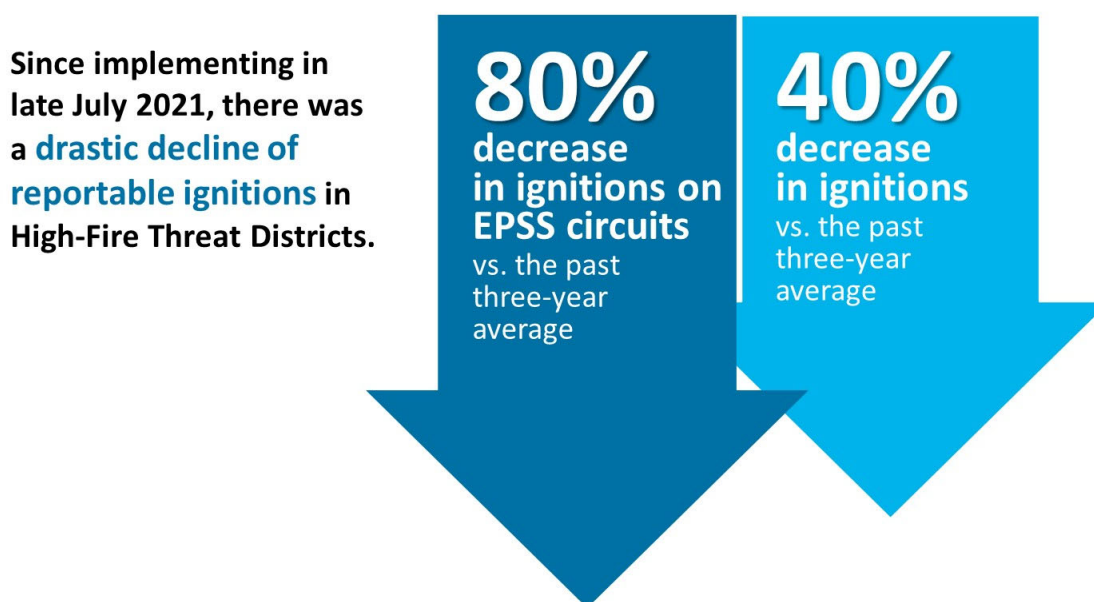

<sup>6</sup> See August Report, pp. 6-7, 14; November Report, p. 14.

ignited during non-RFW days in PG&E’s service area, in comparison to 2020 where 47% of the total acreage (~3 million) burned by wildfires ignited during non-RFW days.

Therefore, in July 2021, to address this dynamic climate challenge, we implemented the EPSS program on approximately 11,500 miles of distribution circuits, or 45% of the circuits in HFTD areas. EPSS involves engineering electrical equipment settings so that power is automatically turned off if the system detects a problem, such as an object striking a line. This can prevent objects that touch a line, such as vegetation, from becoming a fire ignition source.

Once implemented, the results of our EPSS program were significant, leading to a dramatic reduction in CPUC-reportable ignitions as indicated in Figure 2 below:

**Figure 2: Impact of EPSS in 2021 on CPUC-Reportable Ignitions**

Though EPSS resulted in fewer fire ignitions, increased public safety and reduced the risk of a catastrophic wildfire, it also resulted in more customer outages. To address outages and the corresponding customer impacts, we optimized the program, fine-tuning the sensitivity of devices to reduce the likelihood of an outage, improving coordination between our devices to reduce the size and duration of outages, by improving internal coordination of patrol crews for faster restoration times. These measures were effective in improving customer outage impacts.

In addition to proactively working to reduce outage duration, we also assessed the drivers of outage frequency. One of the primary drivers of EPSS-related outages was vegetation, which accounted for at least 33% of the known outages on EPSS-enabled circuits.<sup>7</sup> These findings on

<sup>7</sup> Outages on EPSS-enabled circuits may be classified as “unknown” because the actual cause of the outage is not evident when PG&E personnel investigate the outage and restore service.

ignition risk reduction and customer outages on EPSS enabled circuits require us to evaluate the interplay between EPSS and EVM, and other wildfire mitigation programs to best maximize our risk mitigation.

## **2022 CONSIDERATIONS**

For 2022 implementation, we are considering the best approach to address increased wildfire risk as a result of severe drought. This includes expanding EPSS to the entirety of our HFTD areas because it provides an even greater level of risk reduction. In addition, we are considering further enhancements to reduce the impact of EPSS on customers.

This would be part of a comprehensive approach to addressing wildfire risk, including our vegetation management, PSPS, and our system hardening programs (with undergrounding).

In advance of submitting our 2022 WMP, we are continuing to get stakeholder feedback and evolve our ignition-risk reduction strategies based off our learnings from 2021. Based on our continued analysis or stakeholder feedback, if changes are made to our approach for the 2022 EVM Scope of Work, we will submit a revised February report to provide a detailed description of those changes.

## **CORRECTIVE ACTION PLAN ELEMENTS**

- 1. A detailed description of the circumstances that contributed to PG&E's failure to adequately prioritize the highest risk lines, as described in this Resolution and the WSD's EVM Audit, in its EVM in 2020**

We do not have any updated information to provide regarding this Element.

- 2. A detailed description of its risk model(s) for determining where to target EVM in the next 90 days, including the specific data sets and vegetation management records PG&E is using as inputs to the risk model, and the data modeling program(s) that make up PG&E's risk model**
  - a. 2021 EVM Scope of Work**

Our 2021 EVM Scope of Work used the EVM Tree-Weighted Prioritization List to determine where to target EVM work.<sup>8</sup>

---

<sup>8</sup> Corrective Action Plan, pp. 9-15 (describing development of and data used in EVM Tree-Weighted Prioritization List).

**b. 2022 EVM Scope of Work**

Our 2022 EVM Scope of Work continues to use the EVM Tree-Weighted Prioritization List to inform our workplan. If changes are made to this approach, we will file a revised February Report explaining the changes.

**3. A detailed list of the EVM projects for the calendar year of the reporting date and the EVM plan for the subsequent calendar year, when available**

**a. Year-End Status of the 2021 EVM Scope of Work**

Attachment A provides the year-end status of the 2021 EVM Scope of Work including the following information:

- Column 1: Circuit Name
- Column 2: Circuit Protection Zone
- Column 3: Remaining EVM Miles – 1/1/2021<sup>9</sup>
- Column 4: Forecasted Tree Work
- Column 5: EVM Tree-Weighted Risk Score
- Column 6: EVM Tree-Weighted Risk Rank
- Column 7: EVM Plan (*i.e.*, initial 1,800 mile plan or 2,400 mile plan)
- Column 8: Risk Tranche
- Column 9: Miles Complete and Verified as of 12/31/2021 (Audited)
- Column 10: Miles Work Verified with No Overhead Present as of 12/31/2021 (Audited)
- Column 11: Miles Ready for Work Verification as of 12/31/2021 (Unaudited)
- Column 12: Miles Constrained as of 12/31/2021 (Unaudited)
- Column 13: Remaining EVM Miles – 12/31/2021 (Unaudited)<sup>10</sup>

---

<sup>9</sup> Column 3 represents the remaining miles of EVM work that had not passed work verification to be performed in the 2021 EVM Scope of Work as of January 1, 2021.

<sup>10</sup> This column represents the remaining miles on the CPZs in the 2021 EVM Scope of Work as of December 31, 2021.

In addition to the 2021 EVM Scope of Work miles reported in Attachment A, at the beginning of 2021 we continued to complete the portion of 2020 work that was “in progress” at the end of 2020.<sup>11</sup> Although this carryover work falls outside of the CPZs included in the 2021 EVM Scope of Work, because the work was performed in HFTD areas and mitigated ignition risk for these circuits, we have included these carryover miles in our EVM mileage totals. We are including as Attachment B a list of the 2020 carryover work performed in 2021. Table 2 below summarizes the EVM completed and verified miles through December 31, 2021:

**Table 2: Miles of EVM Work Completed In and Outside 2021 EVM Scope of Work**

<b>CPZ Category</b>	<b>November Report Attachment</b>	<b>Miles of EVM Completed and Verified (Through 12/31/2021)</b>
In 2021 EVM Scope of Work	Attachment A	1,895
Outside 2021 EVM Scope of Work	Attachment B	88 <sup>12</sup>
Total		1,983

**b. Status of the 2022 EVM Scope of Work**

PG&E’s current 2022 EVM Scope of Work is provided in Attachment C. Attachment C identifies each of the CPZs in our 2022 EVM Scope of Work in risk-ranked order using the EVM Tree-Weighted Prioritization List. In addition to the CPZs identified in Attachment C, we will continue to perform EVM work on the CPZs from the 2021 EVM Scope of Work where work was not completed because of external constraints, such as permitting or landowner refusals, or resource constraints.

**4. A description of how the list in item 3 above ensures PG&E is prioritizing the power lines with highest risk first**

As we explained in the Corrective Action Plan, “[t]he 2021 EVM Scope of Work [was] based on the risk-ranked CPZs from the EVM tree-weighted prioritization list.”<sup>13</sup> In Element 3 above, we have provided the year-end status of our 2021 EVM work. The 1-n approach that we utilized in 2021 ensured that PG&E prioritized the highest risk ranked CPZs. In addition, a small portion of the 2021 EVM work was carry over from 2020. As Table 1 in the Executive Summary indicates, 98% of our EVM work in 2021 was performed on the top 20% of risk-ranked CPZs.

<sup>11</sup> In progress miles are miles where the EVM process was started but had not been completed through work verification by the end of the year. We refer to these as carryover miles or carryover work.

<sup>12</sup> Please note that 63 miles of the 88 carryover miles, or 72% of these miles, are in the top 20% of the highest risk areas.

<sup>13</sup> Corrective Action Plan, p. 18.

We are continuing this approach in 2022 and if changes are made to this approach, we will file a revised February report.

**5. A description of PG&E’s decision-making that leads to the list in item 3: how the list is developed, evaluated, revised in terms of projects that are added to or dropped from the list, finalized, and communicated to EVM work crews, and PG&E’s internal documentation of the decision-making process**

In Element 5, we provide updated information on: (a) the development of the 2022 EVM Scope of Work; (b) communication with EVM work crews; and (c) internal documentation of decision-making.

**a. Development of 2022 EVM Scope of Work**

The development of the 2022 EVM Scope of Work is described in Elements 2 and 3.b above, and the 2022 EVM Scope of Work is provided in Attachment C.

**b. Communication with EVM Employees and Contractors**

We previously described our employee and contractor communications in the November Report.<sup>14</sup> In addition, at the Public Workshop on the Corrective Action Plan hosted by the Commission on November 8, 2021, a presentation detailing communications at each level and our communication strategy was provided. Because the workshop occurred after the November Report was submitted, we are providing a summary of the workshop discussion below, as well as additional information regarding our communications.

Work available and ready for our tree crews is provided through the ArcGIS Collector system by PG&E personnel, who review and release the work in small increments for the tree crews to schedule and execute. By using a unified color coded grid, it places a boundary on the in-scope work with vegetation points. This process and use of ArcGIS Collector limits the tree contractor’s work area to the in-scope and released CPZs. This results in tree crews receiving released work through the ArcGIS Collector in a process controlled and managed by PG&E personnel focused on the work that is available and unconstrained.

In addition, information is communicated to PG&E’s vegetation management team through our DORs. Each region may hold one or more DORs by work stream given the geographic territory and complexity. There are DORs held for Pre-Inspection which include both internal and contractor resources and the same for Work Verification. In some regions, with significant work scope and complexity like the Sierra region, there may be two DORs for pre-inspection -- one for north Sierra and another for the south Sierra.

---

<sup>14</sup> November Report, p. 12.

PG&E also conducts a monthly “Vegetation Scorecard” call with its Vegetation Management contractors. These calls are with individual VM contractors to review metrics in four categories: Safety, Quality, Financials, and Execution. This call provides an open forum with our contractor partners to understand any concerns/issues in the field, answer any questions, highlight any overall program changes, and resolve obstacles related to execution. These calls are attended by PG&E employees in various departments and contractor employees.

Finally, on January 26, 2022, we held our monthly Vegetation Management All Hands meetings to review 2021 end of year performance and a high-level of EPSS and its potential partnership with the 2022 EVM workplans.

**c. Internal Documentation of Decision Making**

Our November Report described in detail our internal documentation process for decision making. There have been no changes to this process since the November Report was submitted.

**6. An explanation of the rationale for any planned EVM work that does not target the power lines with highest risk first**

As explained above in Elements 2-4, we are using a risk-ranked approach based on the EVM tree-Weighted Prioritization List to inform our 2022 EVM Scope of Work. This is consistent with the approach that we implemented for the 2021 EVM Scope of Work. If changes are made to this approach, we will file a revised 90-day report.

**7. Any changes to the 2021 Wildfire Distribution Risk Model, the Wildfire Consequence Model, or the Vegetation Risk Model occurring over the prior 90 days or planned for the subsequent 90 days**

In the past 90 days, we did not make any changes to the 2021 Wildfire Distribution Risk Model (WDRM), Wildfire Consequence Model, or Vegetation Risk Model for purposes of the 2021 EVM Scope of Work. We have made changes to the WDRM which will be described in detail in our 2022 WMP. However, the changes to the WDRM did not impact the 2021 or 2022 EVM Scopes of Work.

**8. A detailed description of the circumstances that contributed to PG&E management’s inconsistent reporting on the details of its risk modeling and risk ranking lists**

We do not have any updated information to provide regarding this Element.

9. **Verification by a senior officer of PG&E that the risk model, including underlying data sets and vegetation management records, it is using to prioritize EVM is as set forth in its report**

Attachment D to this February Report includes the verification of Sumeet Singh, our Interim Chief Safety and Risk Officer.<sup>15</sup>

10. **Verification by a senior officer of PG&E that it will target a substantial majority of EVM to the highest risk circuit protection zones first, as shown by its risk model or other ranking, in the next 90 days for EVM**

Please see Attachment D.

11. **Verification by a senior officer of PG&E that it targeted a substantial majority of EVM to the highest risk circuit protection zones first, as shown by its risk model or other ranking, in the prior 90 days**

Please see Attachment D.

12. **Verification by a senior officer of PG&E that the company has communicated information and internal decisions in items 3, 4 and 9 above to personnel of PG&E's EVM programs and that such personnel is aware of where to target EVM in the subsequent 90 days**

Please see Attachment D.

13. **A proposed timeline for ending the required reporting, with a detailed explanation of why the proposal ensures PG&E is in compliance with the requirement that it prioritize high risk circuits in its EVM work. The timeline shall include milestone goals for June 1, 2021, September 1, 2021, and December 31, 2021. These goals shall include a targeted percentage of high-risk power line circuits to be completed by those dates.**

We are not making any changes to our proposal that the reporting related to EVM performance end in February 2022.<sup>16</sup>

Our Corrective Action Plan commitment was to complete 210 high risk miles by June 1, 2021, 850 high risk miles by September 1, 2021, and 1,800 miles by December 31, 2021.<sup>17</sup>

---

<sup>15</sup> PG&E filed a Petition for Modification to Commission Decision (D.) 20-05-053 on December 15, 2021 to combine the roles of Chief Safety Officer and Chief Risk Officer.

<sup>16</sup> Corrective Action Plan, pp. 24-25.

<sup>17</sup> High risk miles are defined as the top 20% of CPZs based on risk ranking from the EVM tree-weighted prioritization list and fire impacted miles.

Table 3 below is revised from the November Report and provides a summary of our 2021 EVM work as of December 31, 2021.

**Table 3: Summary of EVM Work in 2021**

<b>Date</b>	<b>Corrective Action Plan Commitment (Miles)</b>	<b>Corrective Action Plan Commitment for Percentage Completion<sup>18</sup></b>	<b>Actual Miles<sup>19</sup></b>	<b>Actual Percentage Completion</b>	<b>Approximate Tree Count<sup>20</sup></b>
June 1, 2021	210	11%	415	23%	27,249
September 1, 2021	850	47%	1,034	57%	120,013
December 31, 2021	1,800	100%	1,983	110%	335,543

**14. A description of how the Corrective Action Plan proposed in response to this Resolution will complement and not undermine PG&E’s compliance activities ordered in the D.20-05-019**

We do not have any updated information to provide regarding this Element.

**CONCLUSION**

This February Update provides an overview of events which have occurred since we submitted the November Update. We appreciate the opportunity to provide these updated materials to the Commission, SED, Energy Safety, and interested parties and look forward to receiving continued feedback on our EVM program.

---

<sup>18</sup> Percentage completion is based on a commitment of approximately 1,800 miles of EVM work performed by the end of 2021.

<sup>19</sup> Includes EVM miles that are both in the 2021 EVM Scope of Work (Attachment A) and outside the 2021 EVM Scope of Work (Attachment B), as explained in Element 3(a).

<sup>20</sup> Data is approximate and unaudited; total tree count represents all trees worked as part of the EVM trees and not exclusive to the 1,800-miles workplan. This includes completed verified miles and trees on constrained miles.

Note: "As part of EVM's process, a circuit segment categorized as completed (work verified), may revert to an in-progress status if a new vegetation point (tree) is associated with a circuit segment after the work verification was completed. If this were to occur, miles associated with this circuit segment will not be recognized as complete until work verification has been performed. This condition could cause progress which was recognized in one quarter to not be recognized in a subsequent quarter."

Note: "As part of EVM's process, a circuit segment categorized as completed (work verified), may revert to an in-progress status if a new vegetation point (tree) is associated with a circuit segment after the work verification was completed. If this were to occur, miles associated with this circuit segment will not be recognized as complete until work verification has been re-performed. This condition could cause progress which was recognized in one quarter to not be recognized in a subsequent quarter."

**Updated Verification of Sumeet Singh**

## Verification of Sumeet Singh

1. I, Sumeet Singh, am submitting this verification as a part of Pacific Gas and Electric Company's (PG&E) 90-Day Report submitted on February 2, 2021 (February Report). Below, I address the Elements of the November Report that require an officer verification.

2. I am currently employed by PG&E as an Executive Vice President and the Chief Risk Officer and interim Chief Safety Officer. I make this verification based on my own personal knowledge and/or based on information provided to me by other PG&E employees who have responsibility over the specific areas identified or responsibility for verifying and validating information.

3. Element 9 requires a "verification by a senior officer of PG&E that the risk model, including underlying data sets and vegetation management records, it is using to prioritize [Enhanced Vegetation Management (EVM)] is as set forth in its report." The risk models used for the 2021 and 2022 EVM Scope of Works, including data sets and vegetation management records, were described in the Corrective Action Plan that PG&E submitted on May 6, 2021.

4. Element 10 requires a "verification by a senior officer of PG&E that it will target a substantial majority of EVM to the highest risk circuit protection zones first, as shown by its risk model or other ranking, in the next 90 days for EVM." In the next 90 days, PG&E will use the 2022 EVM Scope of Work described and included in the February Report to perform EVM work. The 2022 EVM Scope of Work utilizes a risk-ranked list of Circuit Protection Zones (CPZs) to prioritize the highest risk CPZs and perform work on these CPZs using the 1-n risk ranking approach, to the extent feasible. The 2022 EVM Scope of Work can be modified by the Wildfire Risk Governance Steering Committee (WRGSC) to account for external circumstances such as delays in the permitting process, customer refusals, and changes in work resulting from wildfires that have required us to modify our workplans. If changes are made to this approach, we will file a revised 90-day report to describe those changes.

5. Element 11 requires a "verification by a senior officer of PG&E that it targeted a substantial majority of EVM to the highest risk circuit protection zones first, as shown by its risk model or other ranking, in the prior 90 days." As indicated in Table 1 of the February Report, 98% of the EVM work in 2021 was performed on the top 20% of risk ranked circuits. Details regarding the year-end status of the EVM work performed in 2021 is provided in Attachments A and B. The information in Attachment A and B was provided by our Vegetation Management team. In addition, some of the information in Attachments A and B has been reviewed by our Internal Audit organization. The information that Internal Audit has reviewed is designated as "audited."

6. Element 12 requires a “verification by a senior officer of PG&E that the company has communicated information and internal decisions in items 3, 4 and 9 above to personnel of PG&E’s EVM programs and that such personnel is aware of where to target EVM in the subsequent 90 days.” On information and belief, Element 5.b in the February Report, as well as the 90-Day Report that we submitted on November 4, 2021, describe the communications that PG&E has had with EVM personnel and contractors regarding EVM work.

I verify that the statements above are true and correct to the best of my knowledge or, where indicated, on information and belief. This verification was executed in San Ramon, California on February 2, 2022.
